

## WHAT IS KIAAT?

Kiaat is commonly found in Central and Southern Africa, and is well known in SA. It is also known as "Mukwa, umbila, loedhout" or Wild Teak. Kiaat, is a hardwood, appealing to the eye as it is a beautiful brown filtered with streaks of white and highlighted with flames of red and orange that enhances the colour of the product.

Kiaat is durable and food safe, has a spicy fragrance and is insect resistant. This wood has great stability and it keeps its shape very well.

Not to be submerged in or exposed to excessive amounts of water, clean with damp cloth only rinse and dry in warm area.

470 x 270 x 175mm

## CLEANING AND MAINTENANCE

### CLEANING

- Use warm water with soap.
- No scouring pads must be used.
- Wipe off with cloth and apply sunflower oil regularly to maintain the timber lustre.
- Not dishwasher safe.
- Do not submerge in water.
- Do not expose to high heat.
- Do not expose to UV or Infrared light.

### FOOD SAFE

- Timber contains a resin and enzyme that has natural antibiotics that kill germs known to cause food poisoning.
- The timber is a slow growing tree and is very hardy and does not absorb fluid at all if oiled regularly.
- The oil seals the surface which retards absorption of liquids
- Wood is bacteria free.
